## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 40-51 and 68-79 are rejected under 35 U.S.C. 102(b) as being anticipated by Maruyama, in JP 11-187013-A. Citations of Maruyama in this rejection will be taken from the English translation provided.

With regard to claims 40, 47, 68, 73, and 75, Maruyama discloses a device for use in an information processing system that distributes encrypted message data (pages 9-10 par. [0004], page 20 par. [0020]), the device including, a receiver (page 9 par. [03]) for receiving the encrypted message data and an enabling key block, the EKB including encrypted keys (page 13 lines 27-34) and a tag (key list, page 14 par. [10]), the encrypted keys including at least one renewed key (page 13 lines 12-14) and the tag including position discrimination data that associates each of the encrypted keys with nodes and leaves of a hierarchical tree structure (page 13 lines 1-11), a memory for storing a key set, the key set including at least one key corresponding to a node or leaf of the hierarchical tree structure (page 13); and an encryption processor operable to (a) decrypt the encrypted keys of the received EKB using the stored key set and the position discrimination data of the received EKB to recover the at least one renewed key (page 13 lines 27-36) and (b) decrypt the received encrypted message (content) using

the at least one recovered renewed key (page 20 par. [0020]). The EKB only comprises key corresponding to a node of a simplified tree structure (page 13 lines 12-25) that only updates needed keys in which the intermediary keys are not present (page 21 par. [0021]).

With regard to claims 41, 69, and 74, Maruyama discloses encrypting the new key with the old key (page 4 step 740, page 19 par. [0018]).

With regard to claims 42-45 and 70-72, Maruyama discloses the EKB only comprises key corresponding to a node of a simplified tree structure (page 13 lines 12-25) that only updates needed keys (page 21 par. [0021]).

With regard to claim 46, Maruyama discloses having not less than tree branches connecting the top node with terminal nodes (page 25, [Fig 5]).

With regard to claims 48-51 and 76-79, Maruyama discloses that the block is sent, the block itself reads on a message, and the receiver needs the previous key block to decrypt this message, including keys.

### ***Response to Arguments***

3. Applicant's arguments filed 25 September 2006 have been fully considered but they are not persuasive.

4. With regard to applicant's argument that Maruyama only consolidates relevant nodes but does not remove unnecessary nodes in his simplified tree structure, the examiner points out that by using only the relevant nodes, the unnecessary ones are removed.
